EDUCATION

Bachelor of Technology in Computer Science and Engineering

Guru Tegh Bahadur 4th Centenary Engineering College, Affiliated to GGSIPU

Expected Graduation: 2028 | GPA: 8.67/10 (till semester 4)

Intermediate

Sam International School, Dwarka (CBSE)

Graduation: 2024 | Percentage: 85.4%

TECHNICAL SKILLS

Programming Languages: C/C++, HTML, CSS, Javascript, Python, Node JS, React, Express

Tools & Technologies: Github, Excel, PowerPoint, Canva, Chat-GPT, Claude.ai

Operating Systems: MacOS, Windows, Linux

Databases: MySQL, MongoDB

Other Skills: Full Stack Developer, Public Speaking

EXPERIENCE

Software Developer

19 April-19 June

Esecurityin

- Developed an AI-powered Student Services Platform featuring an intelligent chatbot, AI mock interviews, career portal, and admin dashboard with real-time analytics.
- Built secure authentication, role-based access, file uploads, and personalized course recommendations using Google Gemini AI.
- Tech Stack: React, Vite, Node.js, Express.js, MongoDB, Redis, Socket.io, Google Gemini AI, JWT.

PROJECTS

LegalAllyAI—AI Legal Document Analyzer ([LegalAlly](#))

Tech Stack: React, Node.js, Express, Gemini 2.5 Flash, Tesseract OCR, Docker, Vercel, Render

- Built a full-stack platform that analyzes legal documents and generates summaries, risk levels, and clause explanations using Gemini AI models.
- Added support for PDFs, images, and scanned documents using a Tesseract-based OCR pipeline.
- Implemented document-aware Q&A; chatbot and click-to-highlight risky clauses inside the PDF viewer.
- Deployed frontend on Vercel and backend on Render (Dockerized).

Secure Identity-Based Self-Destructing Data Transfer System ([ShiftDEL](#))

Tech Stack: React, FastAPI, Python, OpenCV, AES Encryption, PyInstaller

- Built a zero-trust secure data transfer system for removable storage with identity-based access control using facial recognition.
- Implemented real-time face authentication (<1s latency) to grant controlled access to encrypted data.
- Engineered a self-destruct mechanism (data overwrite + key deletion) triggered after access or multiple failed attempts, ensuring irreversible data loss.
- Developed AES-encrypted isolated storage, preventing unauthorized filesystem-level access even under device compromise.
- Designed a modular sender-receiver architecture for scalable encryption, authentication, and execution workflows.
- Packaged as a fully offline executable, eliminating cloud dependency and reducing external attack surface.

IoT Data Normalization API

Tech Stack: Python, Flask, JSON, unittest, Replit

- Built a Python ETL pipeline to normalize multiple inconsistent JSON schemas into a unified structure.
- Implemented timestamp normalization and schema mapping for inconsistent fields.
- Completed as part of Deloitte Technology Virtual Experience on Forage.

AWARDS AND ACHIEVEMENTS

- Technology Job Simulation Certificate by Deloitte
- MERN Stack Development Certification by Udemy
- Frontend Development Certification Course by PurpleHills (GrapeCity)
- Employability Skill Training Programme by Mahindra Pride Classroom

EXTRACURRICULAR ACTIVITIES

- Student Culture Head, Shutterfly
- Content Team Member, IEEE GTB4CEC
